Do you encounter health ethics issues as part of your daily employment? Would you like to be better prepared to handle ethical conflicts? Consider the Graduate Certificate in Health Ethics.

The Graduate Certificate in Health Ethics is ideal for the working professional such as physicians; advance practice nurses; nurses; respiratory therapists; healthcare administrators; rehabilitation professionals; social workers; chaplains; and graduate level students in the health professions.

Students enrolled in the certificate program will develop a better understanding of the ethical issues related to healthcare. They will enhance their skills in analyzing and resolving ethical problems and conflicts that arise in the healthcare environment.

The courses are entirely online, which allows the students to continue their full-time employment while working towards completing the certificate program.

Graduate Certificate in Health Ethics

Graduate Certificate in Health Ethics requires the completion of 4 graduate courses.

**HMI 7564: Health Ethics Theory**
This course includes topics in metaethics and normative ethics with a focus on how they relate to situations and controversies in healthcare. Other topics include the status of moral norms, utilitarianism, deontology, distributive justice, cultural relativism, methods of ethics case workup and ethics consultations and committees.

**HMI 8565: Healthcare Ethics**
This course deals with case based analysis and discussion of topics in clinical ethics such as abortion, euthanasia, stem cell research, healthcare resource allocation and the relationships between clinicians and patients.

**HMI 7566: Health Informatics Ethics**
This course deals with the moral problems and controversies arising in the use and management of health information. Such issues include privacy and confidentiality, controversial documentation practices, the use of decision support and computer system errors.

**HMI 7567: Health Organizational Ethics**
This course considers the moral issues arising in the management of healthcare organizations. These includes moral responsibilities of healthcare organizations, codes of ethics, marketing practices, conflict of interest and the obligations to employees and to patients.
